DIVING BOMBER JU-87

PAPER MODEL FROM THE «PAPER ARMY»

HISTORICAL REFERENCE

The Junkers 87 dive bomber was developed in Germany in 1935 and used by the Luftwaffe until 1945. This aircraft was used as an offensive means and closely interacted with ground forces, as "flying artillery", the main tasks for Junkers were the destruction of important objects, military equipment and firing points of the enemy. For intimidation and sound control, the plane had a siren, it was his "calling card", with this siren the plane became the symbol of the Blitzkrieg.
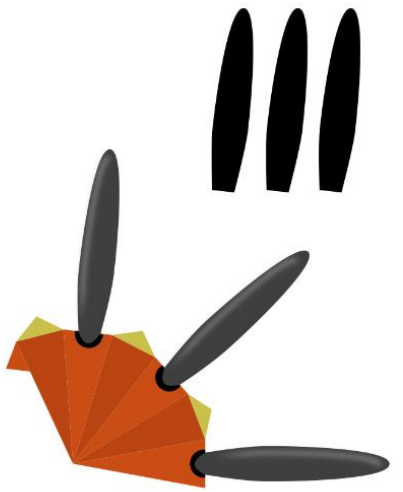

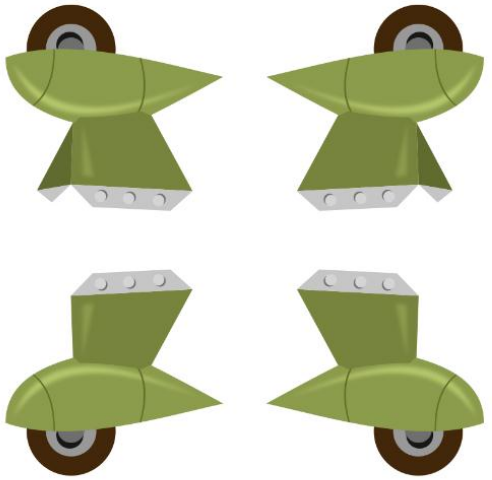

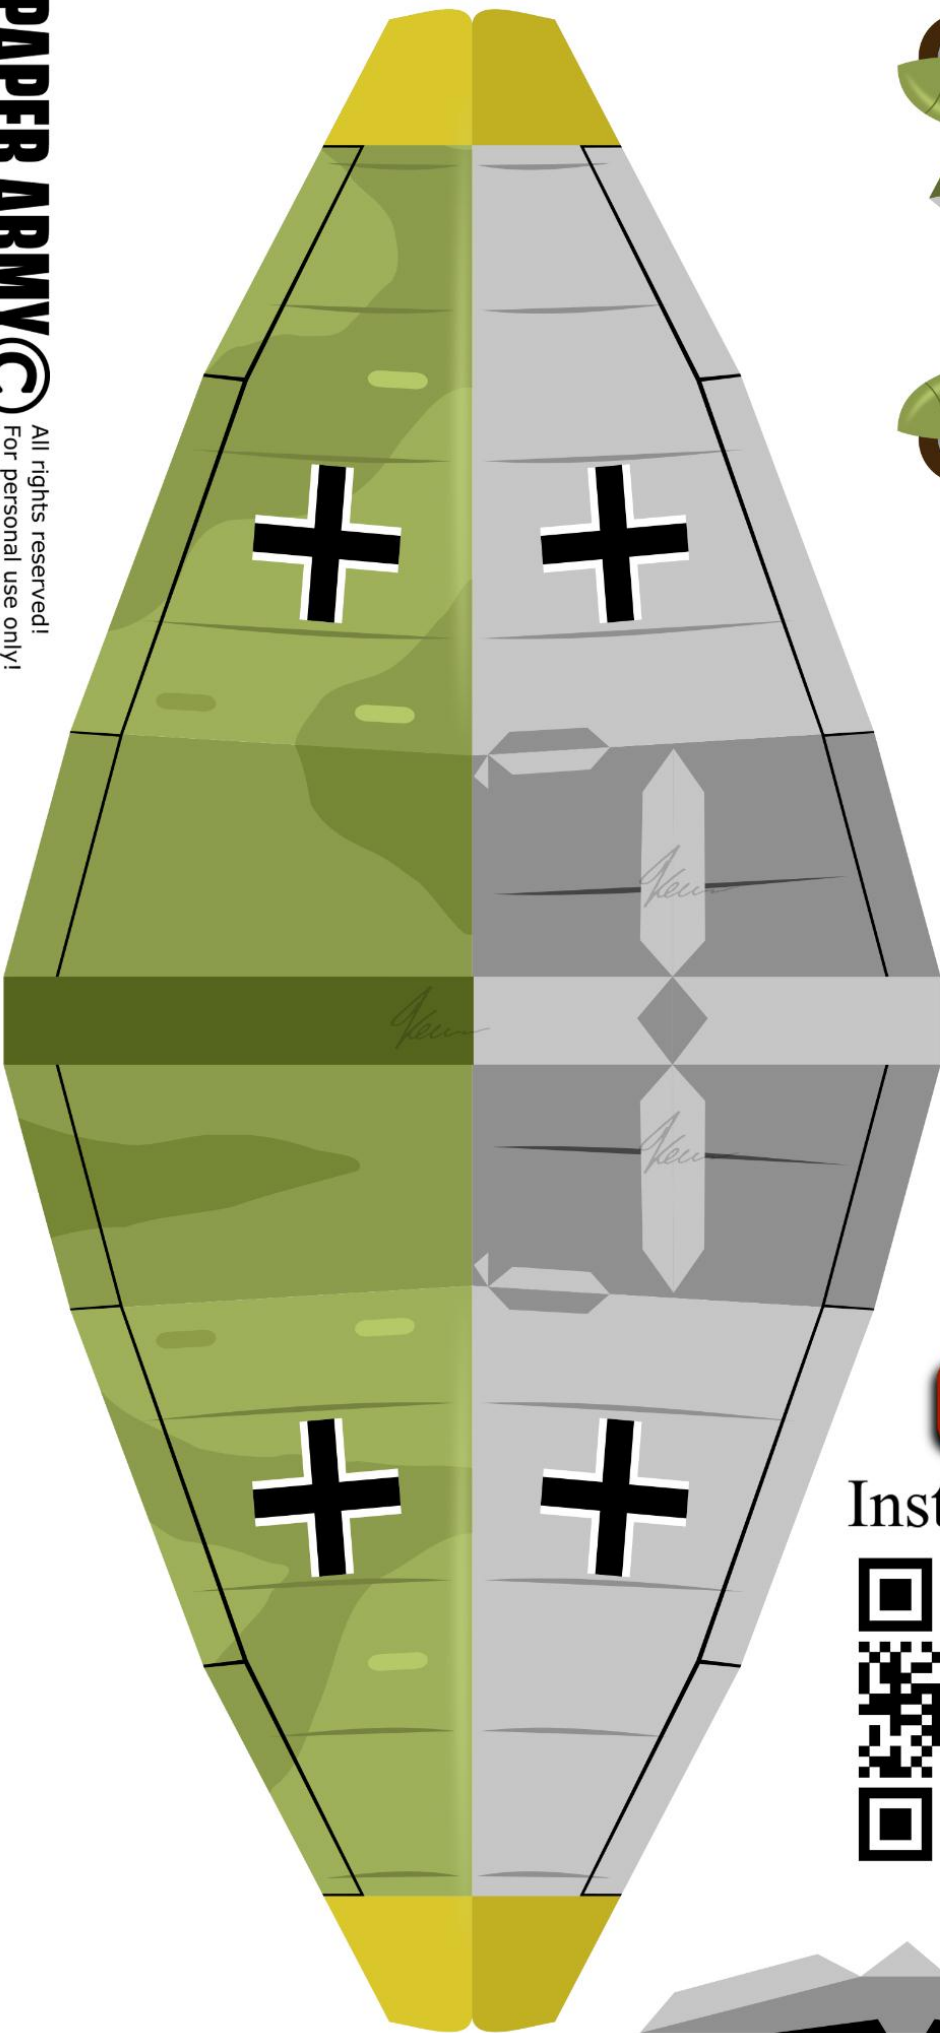

PRINTING INSTRUCTIONS

To print a model of a tank, you need to select sheets of a document with a template, printing is carried out on A4 sheets (international format, 210 by 297 mm), if you have a different paper size, it's okay, you can print on it, the main thing in this case is do not stretch on the whole sheet (violation of the aspect ratio of the sheet), since this will change all the dimensions of the model, if, when printing on a different format, it turns out that there is an empty space on the sheet - let it remain, if the model is reduced in size, this is also not scary, there will be changes insignificant.
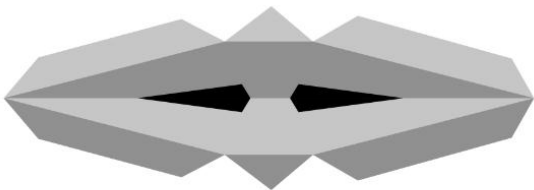

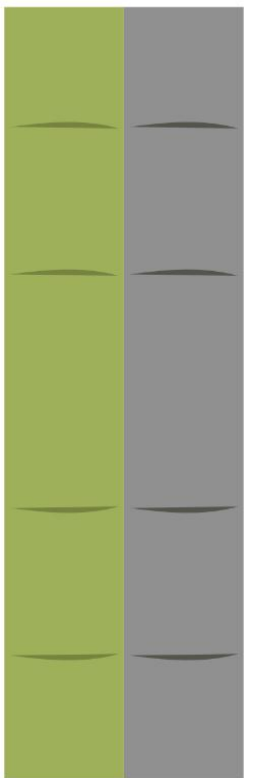

CUTTING AND GLUING INSTRUCTIONS

For all models, a separate video assembly instruction is provided, this video is available on my "Paper Army" YouTube channel at this link – "How to make paper plane Ju 87" (Rights reserved, commercial use is prohibited, deposit has been made).

FRIENDS

All models are free, but they are created with difficulty to support the author of the models and the "Paper Army" channel watch the video on this link to the end - "Video Review of the Churchill Paper Tank", this is a video with a review of the assembled the same model of the Churchill tank You downloaded, with epic music, watching the video to the end, like and commenting will help the channel in promoting and other lovers of collecting paper models will see the video and also come to the channel - this is the best support, thanks;)
